The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status							
1) Responsive to communication(s) filed on 0.	<u>5 June 2003</u> .						
2a) ☐ This action is FINAL . 2b) ☑	This action is no	n-final.					
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is							
closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213. Disposition of Claims							
4)⊠ Claim(s) <u>1-3,5,6,9-17,36 and 38-46</u> is/are pending in the application.							
4a) Of the above claim(s) is/are withd	rawn from cons	deration.					
5) Claim(s) is/are allowed.							
6)⊠ Claim(s) <u>1-3,5,6,9-17,36 and 38-46</u> is/are rejected.							
7) Claim(s) is/are objected to.							
8) Claim(s) are subject to restriction and	d/or election req	uirement.					
Application Papers	inor						
9) The specification is objected to by the Examiner.							
10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).							
Applicant may not request that any objection to the drawing(s) be field in abeyance. Good of of the insolation of the drawing the field in abeyance. Good of of the insolation of the drawing the drawing the insolation of the drawing the draw							
If approved, corrected drawings are required in reply to this Office action.							
12) The oath or declaration is objected to by the Examiner.							
Priority under 35 U.S.C. §§ 119 and 120							
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).							
a) ☐ All b) ☐ Some * c) ☐ None of:							
1. Certified copies of the priority docume	ents have been	received.					
2. Certified copies of the priority documents have been received in Application No							
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).							
* See the attached detailed Office action for a list of the certified copies not received.							
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).							
 a) ☐ The translation of the foreign language provisional application has been received. 15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Art Unit: 2814

DETAILED ACTION

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 38 46 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. Claim 38 refers to a barrier overlying the metal layer but the specification only refers to a diffusion barrier. Is the barrier the diffusion barrier?
- 4. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 5. Claims 10 and 42 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claims refer to a structure that is not described in the specification and is therefore not enabled. The specification describes the embodiments shown in Figures 1, 2 and 3, none of which correspond to these claims.
- 6. Claims 11 and 16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with

Art Unit: 2814

which it is most nearly connected, to make and/or use the invention. Claim 11 describes a bonding layer as being multilayered but there is no disclosure describing the materials, number or thickness. Claim 16 refers to the fixation layer as being multilayered and is similarly non enabled.

New Matter

7. The amendment filed 6/20/02 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: The specification and original claim 6 only refer to Ni, Pd and Pt.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 1 3, 5, 6, 9 13, 15 17, 36, 38 43 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al. in view of Kitagawa et al. and Mitsui.
- 10. With respect to claims 1 and 36, Nakamura et al. show a GaN LED (see cover Figure and column 3, line 40 et seq.) with a p-contact that could be Ag (column 6, line 66) but does not show further layers. Kitagawa et al. show a luminescent device (see cover Figure and column 3, line 30 et seq.) that has a p-electrode 16 and a protective film 17 that protects the electrode form

Art Unit: 2814

deterioration (column 5, line 10). Note that Kitagawa et al. show that layer 17 can be ZnS or ZnSSe (column 5, line 10) which is a semiconductor and is therefore conducting. Since Ag is also subject to deterioration it would have been obvious to provide a protective film on the Nakamura et al. device. Mitsui shows (see constitution) that for a solar cell a layer of Au on Ag will prevent deterioration of the Ag. It would have been obvious to protect the electrode as shown by Kitagawa et al. and to use Au as the protective film since it is easier to form than the semiconductor layer of Kitagawa et al. With respect to the 50% reflectivity, it would have been obvious to make the Ag layer have the maximum reflectivity possible and this maximum value is a function of the LED material and the Ag electrode. Note that Kitagawa et al. show a vertical extension of layer 16 which can be considered as a bonding layer.

- 11. With respect to claim 2, Nakamura et al. show a group III nitride.
- 12. With respect to claim 3, it would be obvious to make the Ag layer thick enough to be reflective.
- 13. With respect to claims 5 and 6, the protective film is Au.
- 14. With respect to claim 9, Kitagawa et al. shows layer 16 can be Au (column 4, line 48).
- 15. With respect to claim 10, the bonding layer is less than half the Ag.
- 16. With respect to claim 11, it would have been obvious to use a multilayer structure to balance adhesion and resistivity.
- 17. With respect to claim 12, the fixation layer is between the bonding layer and the Ag layer.
- 18. With respect to claim 13, the fixation layer is metal.
- 19. With respect to claim 15, layer 17 of Kitagawa et al. encapsulates 16.

Art Unit: 2814

- 20. With respect to claim 16, it would have been obvious to use a multilayer structure to balance adhesion and resistivity.
- 21. With respect to claim 17, there is a package with p- and n-electrodes.
- 22. With respect to claim 38, Nakamura et al. show a GaN LED (see cover Figure and column 3, line 40 et seq.) with a p-contact that could be Ag (column 6, line 66) but does not show further layers. Kitagawa et al. show a luminescent device (see cover Figure and column 3, line 30 et seq.) that has a p-electrode 16 and a protective film 17 that protects the electrode form deterioration (column 5, line 10). Note that Kitagawa et al. show that layer 17 can be ZnS or ZnSSe (column 5, line 10) which is a semiconductor and is therefore conducting. Since Ag is also subject to deterioration it would have been obvious to provide a protective film on the Nakamura et al. device. Mitsui shows (see constitution) that for a solar cell a layer of Au on Ag will prevent deterioration of the Ag. It would have been obvious to protect the electrode as shown by Kitagawa et al. and to use Au as the protective film since it is easier to form than the semiconductor layer of Kitagawa et al. With respect to the 50% reflectivity, it would have been obvious to make the Ag layer have the maximum reflectivity possible and this maximum value is a function of the LED material and the Ag electrode. Note that Kitagawa et al. show a vertical extension of layer 16 which can be considered as a bonding layer.
- 23. With respect to claims 39 41, the metal is Ag, the device is GaN the electrode is on the GaN and the barrier contacts the GaN.
- 24. With respect to claims 42 and 43, the protective layer covers the electrode except where is sticks through the layer and covers the edge.
- 25. With respect to claim 45, the protective layer is a metal.

Art Unit: 2814

- 26. Claims 14 and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al. in view of Kitagawa et al. and Mitsui and further in view of Hatano et al.
- 27. Hatano et al. show that for GaN (column 27, line 35) an Ag and Ni laminate can be used as a p-electrode and since Ag is known to need protection it would have been obvious to use the Ag/Ni laminate as an electrode material as a design alternative.
- 28. Claim 44 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al. in view of Kitagawa et al. and Mitsui. and further in view of Shibata.
- 29. Shibata shows that for a p-electrode, the electrode layer has a separate bond pad for external connection (see cover Figure and column 2, line 63 et seq.). It would have been obvious to form the p-electrode over the whole surface and to add the pad layer for external connection to avoid damage to the electrode layer and to avoid interference with the optical characteristics of that layer (column 3, line 43).

Response to Arguments

- 30. Applicant's arguments filed 6/5/03 have been fully considered but they are not persuasive.
- 31. Applicant states that the multilevel bonding layer is shown in the specification but the referenced portion is addressed to an unclaimed structure and is thus not applicable to the claimed structure. Also, the multilevel fixation layer is not shown in the specification.
- 32. In view of the new rejection, Applicant's remarks related to the art rejection are moot.

Art Unit: 2814

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas A Wille whose telephone number is (703) 308-4949. The examiner can normally be reached on M-F (6:15-2:45).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy can be reached on (703) 308-4918. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.

Douglas A. Wille Primary Examiner
